PRO GEAR WITHIN REACH

PRO GEAR WITHIN REACH

TILTA Technology was established in 2010, dedicated to providing high-quality photography and film equipment. From SLR cages to professional camera accessories, we continuously refine and develop our products, gradually evolving from a manufacturer to a comprehensive solutions provider. We have achieved outstanding results in wireless lens control, camera cages, gimbal support systems, shock-absorbing car mounts, and other fields.

After setting up our own factory in 2011, we made unremitting efforts to break into the Hollywood market with our electronic control solutions, which finally succeeded in 2016. In that same year, we also established our North American branch. In April 2017, we opened our showroom in Los Angeles and obtained official certification as a RED manufacturer as well.

As an associate member of the American Society of Cinematographers, our collaboration with many professional photographers enables us to continually improve our products based on their experience and suggestions, inspiring users' imagination and bringing unlimited creativity and possibilities.

The Tilta Float system has the same flexibility and mobility as expensive traditional Steadicam systems, which previously only appeared in high-budget sets.

The revolutionary release of the Hydra Arm Mini provides every creator with a consumer-grade car mount shooting solution that is easy to use.

In the future, TILTA will continue to provide industry-leading products and services, creating more value for the imaging industry and exploring the future of the global film industry with millions of creators.
