PRO GEAR WITHIN REACH

TILTA

PRO GEAR WITHIN REACH

TILTA Technology was established in 2010, dedicated to providing high-quality photography and film equipment.

From DSLR cages to professional camera accessories, we continuously refine and develop our products, gradually evolving from a manufacturer to a comprehensive solutions provider. We have achieved outstanding results in wireless lens control, camera cages, gimbal support systems, shock-absorbing car mounts, and other fields.

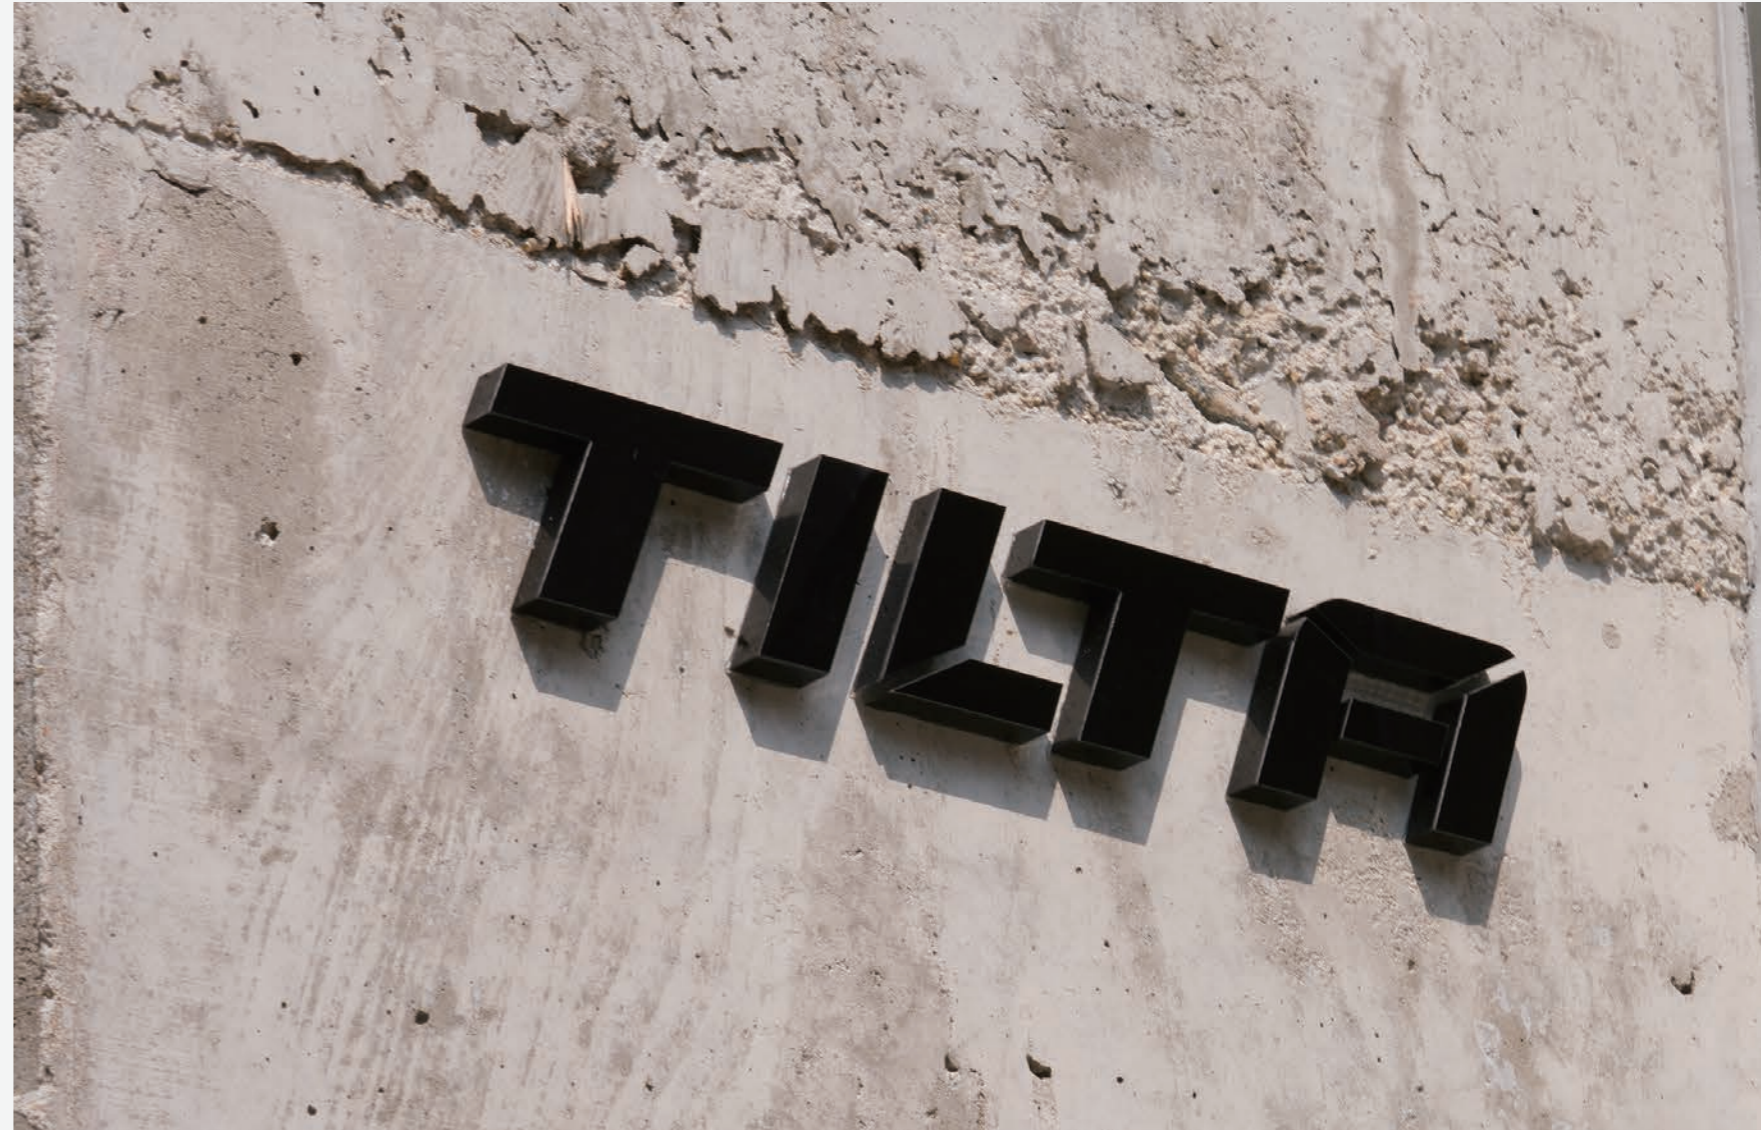

After setting up our own factory in 2011, we made unremitting efforts to break into the Hollywood market with our electronic control solutions, which reached new heights in 2016. In the same year, we also established our North American branch, In April 2017,we opened our showroom in Los Angeles .

As an associate member of the American Society of Cinematographers, our collaboration with many professional cinematographers enables us to continually improve our products based on their experience and suggestions, inspiring users' imagination and providing unlimited creativity and possibilities.

The Tilta Float system has the same flexibility and mobility as expensive traditional Steadicam systems, which previously only appeared on high-budget sets.

The revolutionary release of the Hydra Arm Mini provides every creator with a consumer-grade car mount shooting solution that is easy to use.

In the future, TILTA will continue to provide industry-leading products and services, creating more value for the film industry and exploring the future of the global film industry with millions of creators.
